

Meeting Minutes – 10/13/06 sketches

- Started with installing VS Team on Olga's machine. Olga's DVD didn't work so we ended up installing from the image I burned onto my external hard drive. So far, she didn't see any dialog about the 180 days trial period
- Code conversion for markup
 - Pdf -> no colors, tabs aren't formatted well
 - Word -> Olga to try
- Talked about necessary functionality that our software should have (prototypes developed using Windows Journal – shown later)
 - Color Selector
 - **File Menu**
 - Open File
 - Open Folder
 - Save... (not sure what format and how exactly we should save at this moment)
 - Save Workspace
 - Load Workspace
 - Gradesheet
 - Create Gradesheet
Create a template to be used for grading a particular assignment. We will be asking to specify number of questions, point values and question numbers and/or question description (e.g. User Manual, Documentation, Comments etc)
 - Change Gradesheet
If not changed, we will be using the same gradesheet template for grading every student's assignment. Change will allow them to create a different gradesheet and save that.
 - **View Menu**
 - Toolbars (from MS Journal)
 - Pen
 - Format
- **Future functionality (if possible; still needs to be researched)**
 - Automatically compile everyone's code before grading
 - Add execute functionality to application to execute code while grading
 - Not enabled if a student's code didn't compile and create an exe
 - Clean files created during compilation and execution
- **Questions/ things to do**
 - See what address Olga put down on the proposal
 - Name change
 - Why do we need excel functionality?
 - I talked to Dr. P about this and he said some kind of excel format (csv etc) would allow for tracking grades and even uploading them on webct.
 - What format should we save it in?
 - How many files do we want to return to the students after grading?

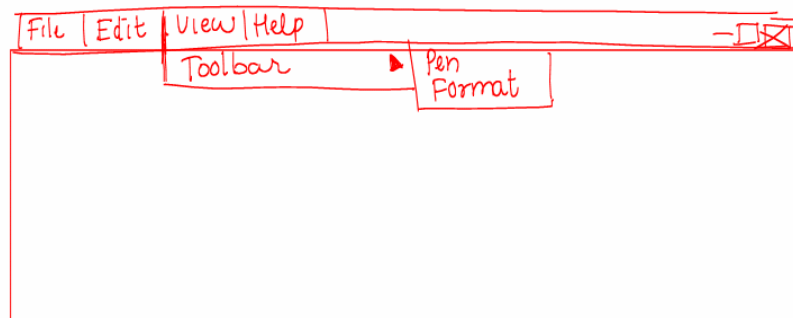

- Menus
 - File Menu

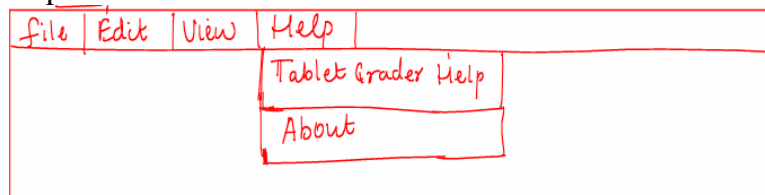

- Edit Menu

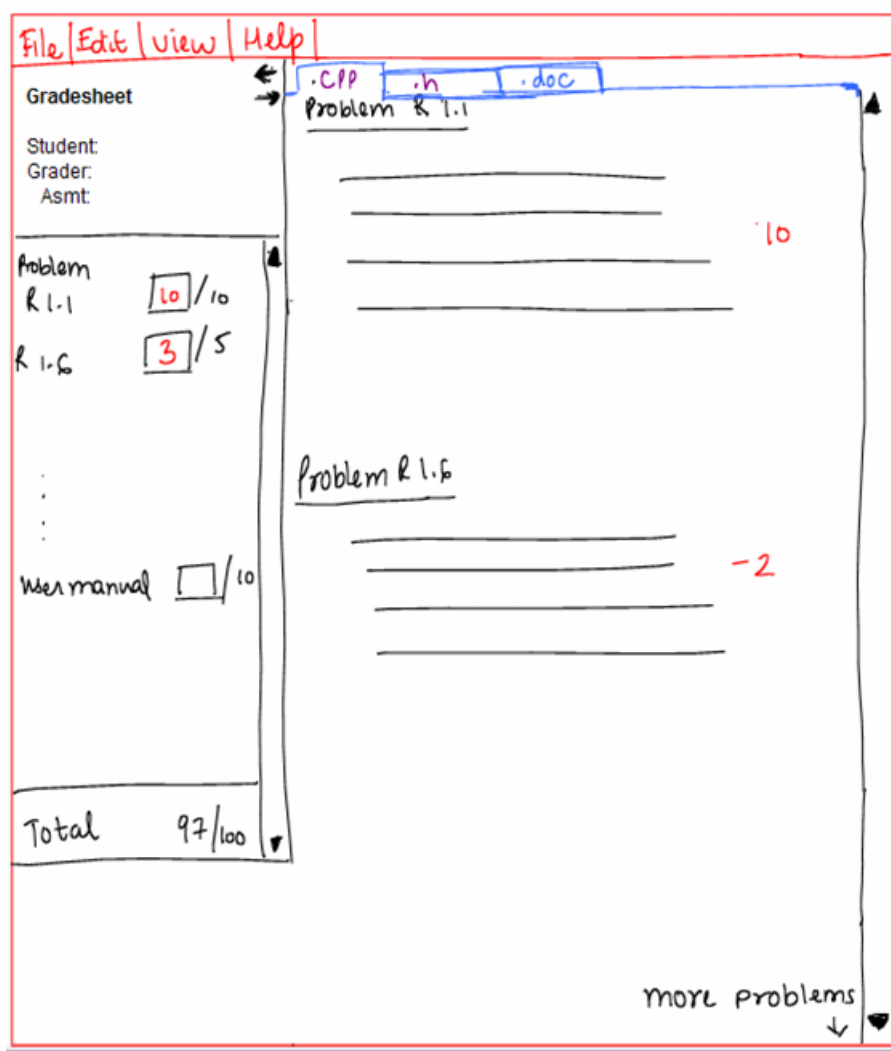

- View Menu

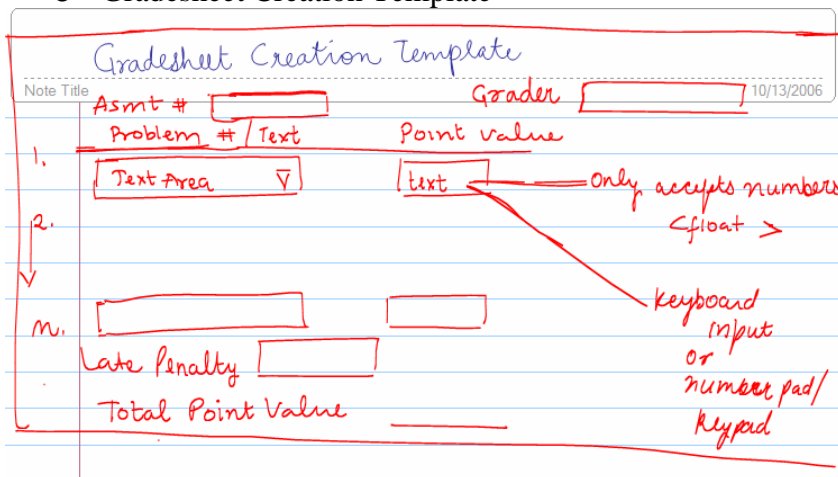

- Help Menu

o Main Window

o Gradesheet Creation Template

o Generated Gradesheet
