

Meeting Minutes – 11/09/06

- Tried to debug Labrador with Yiannis's – Found that it's the updated dll that's probably causing the problem. Labrador's just working on Yiannis's machine only.
- Sat and prototyped the application
- Tried to run Prof. Char's code following Dr. Char's directions, but ran into problems even after adding dll to the safe list. Reinstalling Office with .NET programmability support fixed this issue.
