

## Meeting minutes -9/7/06

- Received our Microsoft Press book → *Building Tablet PC Applications* by Rob Jarrett and Philip Su
- Received our Toshiba M200s. Still to receive Dr. Char's old Tablet.
- Met with Gus Weber, our MS Academic Relations Manager today. Gus told us that he'll try to do everything to help us out with our project – he might be able to provide us with funding to attend conferences to present our work etc, he's also willing to help us get books, software and getting us in touch with Tablet developers from MS – pretty much anything we need (all we have to do is ask).
- Meeting Dianne Curtis from Microsoft @ Grace Hopper
- Vista and Office 12 → we might not be able to run these on our current Tablet's. Microsoft willing to help us out with hardware etc
- Demo of breakout and 3D tic-tac-toe (designed and implemented by Governor school students)
- Ajilix demo
  - Ability to integrate with Journal
  - Yacht and Scribbler demo (with sample code)
  - Standard vs. Professional InfiNotes – see if we need it for our needs

## **Some random things we thought that were interesting**

- Andrew M's ( Dr.P to update last name) blog about Tablet PC
- School of Research in Philadelphia (High School)
  - 170 students
  - Heavy tech based curriculum
- Previous Tablet project related
  - Converting word docs → pdf without user intervention wasn't something that was programmatically possible last time around
  - Code → pdf: successful

## **Things to Do:**

- Install Microsoft Visual Studio Team on tablets – includes VS tools for Office, visual source safe etc
- Burn MSVS DVD for Dr. P and Olga before next week's meeting
- Microsoft Visual Source Safe on server
- **Web update**
  - Open external links in new window

- Redesign site nav bar to indicate current page
- Upload meeting minutes in a separate pdf instead of posting them on the blog – link through the site

**Things we received from Dr. P – code to review**

- Labrador code from Jeff Mercer
- Governor school project files from this year and last year (only about 60% of the files)
