

Digit Output Terminals for Partial Products

TERMINALS A-ASC

Program output pulse terminals associated respectively with A, AS, AC, SC, ASC, on product disposal switch.

TERMINALS F, RS, DS, L, N

Program output terminals for transmitting following signals which occur during multiplication cycle:
 L and N - left and right hand accumulators respectively receive partial products.
 RS and DS - correct for negative multiplicand and/or multiplier respectively.
 F - left hand accumulator transmit contents to right hand accumulator, (or vice versa).
